Education

| 2016-2019 | University of Amsterdam
Bachelor Computer Science | Amsterdam, The Netherlands |
| 2018-2018 | Norges Teknisk-Naturvitenskapelige Universitet
Doing my minor abroad | Trondheim, Norway |

Work

2023-Onwards API Consultancy — Amsterdam, The Netherlands

I am freelancing in Automation, Programming and Infrastructure. With my broad experience and independence I help my clients with technical questions, automation, code enhancements and furthering the development of their platform and codebase. I have implemented automation of uploading and processing of tax forms to the American tax authority. Alongside this I have developed websites and platforms with database, back-end php code, and front-end elements. I have also done maintenance work for technical elements, backend server management, storage management and code fixes.

2021 - 2023 Open Solution Provider — Weesp, The Netherlands

OSP specializes in giving consulting and configuring backup software and infrastructure. I am an IT Consultant here. I have learned about Ansible, networking configuration and considerations, security implications and Unix and Windows server configuration skills.

2020 - 2021 Superscanner — Haarlem, The Netherlands

Superscanner is a business that specializes in data aggregation and provinding insights into the data. They scan supermarkets and other retail stores to keep track of prices, promotions and more information. I worked here with PHP and Laravel. (superscanner.nl)

2017-2020 Ivido — The Hague, The Netherlands

Ivido is a Dutch healtcare platform. At my time here I worked mostly in PHP, Javascript, HTML and CSS. I also learned SCRUM.

2015 - 2023 Calbas — Amsterdam, The Netherlands

Calbas is my company which makes websites for clients. At Calbas I got much experience in web development, working with clients and managing my own business. I have worked mostly with PHP, Javascript, jQuery, HTML and CSS.

Skills

PHP
I have used PHP for many websites and projects. I have used it for websites for clients of my company Calbas. I have used it for more than two years in my work at Ivido.

Python
I have used python during the entire second year of my studies. I also used it for scripts necessary for my thesis.

JS
I have gotten experience with Javascript with making websites for Calbas, for example Speelmee. I used Javascript and jQuery a lot during my time at Ivido.

Linux Management
I think its interesting to understand my operating system and let it work efficiently for me. I have tried varying distributions; Arch, Ubuntu and PopOS. I like writing scripts to make processes more efficient or just plain easier for me.

Databases
From the different DBMS's have I the most experience with MySQL. I used this for websites for Calbas, the project Web and Databases and sometimes for my work at Ivido. I used MongoDB for the project Software Enginering in the second year of Computer Science. Afterwards I wrote my thesis in which I compared MongoDB and MonetDB on performance aspects.

Latex
I have used Latex a lot for reports during my studies. I also used it for my thesis.

C
In the first year of my studies I worked a lot with C, almost all the assignments were written in C.

Git
I have used Git a lot for managing my software. Here is my Gitlab page: gitlab.com/jeroenvb3.

Interpersonal Skills

- Curious and fast learner.
- Teamplayer and ready to help others who need help or don't understand something.
- Not afraid to ask questions.
